

## Fogger that deserves your attention!

### WANJET F30

Although very easy to handle, Wanjet F30 is one of the most advanced machines on the market.

The machine is controlled by a microprocessor, which makes it possible to mix the chemicals and fill the tank during the afternoon and set the application to start during the night.

A stirrer is keeping the chemicals homogenous until the preset time is reached. The automatic program regulates the stages:

**Preventilation** - to build up an air circulation, at a preset time

**Fogging** - until the solution tank is empty, which is checked by a sensor

**Cleaning** - by flushing the system with clean water

**Postventilation** - to distribute the droplets in the air more evenly

After the operation is ready the finish time is reported on a LCD display.

In addition to the above the unit supervises too high or too low voltage.

### WANJET F40

Wanjet F40 is identical to F30 but **everything** double on one frame.

#### Technical details F30

Fog capacity	0-8,5 l/u
Operation	Microprocessor
Range	60 m
Tank	12 l
Cleaning	Automatisch
Voltage	220-240 VAC 1400 W
Air output	5400 m3/u
Ventilator	370 W
Blower	1000 W
Size in cm	+/- 130x70x165
Weight	42 kg
